4. The following is an examiner's statement of reasons for allowance:

With respect to claim 1, in addition to other elements in the respective claim, the prior art fails to teach or suggest "activating being a consequence of a first signal's indication of a first clock cycle of a plurality of consecutive clock cycles, a memory read phase being performed by the memory controller over the plurality of clock cycles, the first read of information occurring within the plurality of clock cycles".

With respect to claims 13, 32, and 39, in addition to other elements in the respective claim, the prior art does not teach or suggest "the memory controller logic circuitry comprising a latch, the latch to latch a first value, the first value to place the termination loads in the activated state, the latch to also provide a second value, the second value to place the termination loads in the deactivated state".

With respect to claim 20, in addition to other elements in the respective claim, the prior art does not teach or suggest "activating being a consequence of a first signal's indication of a first clock cycle of a plurality of consecutive clock cycles, a DDR memory read phase being performed by the memory controller over the plurality of clock cycles, the first read of information occurring within the plurality of clock cycles".

5. The prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Toda et al. and May taken individually or in combination, do not teach the claimed invention of activating consequence of a first signal's indication of a first clock cycle of a plurality of consecutive clock cycles; and the latch of the first value to place the termination loads in activated state, and the second value in the deactivated state, in combination with other limitations.
